

# MYKYTA BOZHENKO

## Python Full-Stack Developer

Kraków, Poland | Remote | [mykyta.bozhenko.dev@gmail.com](mailto:mykyta.bozhenko.dev@gmail.com) | [github.com/pipinovi4](https://github.com/pipinovi4)

### PROFESSIONAL SUMMARY

Python Full-Stack Developer with commercial experience owning a production FinTech platform end to end. Builds asynchronous APIs with FastAPI, SQLAlchemy and PostgreSQL and frontend features with React, Next.js and TypeScript. Experienced in requirements analysis, database design, role-based access control, deployment, production support and direct stakeholder communication.

### TECHNICAL SKILLS

**Backend:** Python, FastAPI, SQLAlchemy, Pydantic, Alembic, REST APIs

**Frontend:** TypeScript, React.js, Next.js, TanStack React Query

**Databases:** PostgreSQL, MongoDB

**Infrastructure:** Docker, Nginx, Linux, Git

**Additional:** Node.js, C/C++, PyTorch

### COMMERCIAL EXPERIENCE

#### Python Full-Stack Developer

2025 - Present

*Confidential FinTech Platform | Remote*

- Built and maintained a production platform for financial operations, team management and administrative workflows.
- Designed and implemented 170+ REST API endpoints using FastAPI, asynchronous SQLAlchemy and PostgreSQL.
- Implemented authentication, refresh-token flows, role-based access control, financial workflows, reporting, reminders, notifications and administrative tools.
- Designed relational data models, Alembic migrations and Pydantic validation contracts for reliable API and database evolution.
- Delivered frontend functionality with React, Next.js and TypeScript, including reusable UI components, API integration and server-state workflows.
- Owned requirements analysis, architecture, debugging, Linux/Nginx deployment and ongoing production maintenance.
- Worked directly with stakeholders to translate changing business requirements into reliable production features.

### ADDITIONAL ENGINEERING EXPERIENCE

- Built backend and full-stack projects using Node.js, MongoDB and REST APIs.
- Developed machine-learning prototypes with PyTorch and algorithmic solutions in C/C++.
